                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences. Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:338-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
                                                                                                                                                                                                                                                                                                                                                                                         Direct Submission

Direct Submission

Consensus quality: 199351 bases at least Q30
Consensus quality: 199052 bases at least Q30
Insert size: 191678; sum-of-contigs
ANOTE: This is a 'working draft' sequence. It currently
consists of 6 contigs. The true order of the pieces
about the contigs are represented as
true of N. but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          7649: contig of 7649 bp in length
7749: gap of 100 bp

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                  This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                       SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8 The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NEIGHBORING SEQUENCE INFORMATION:
Actual start of this clone is at base position 1 of RP11-809C23;
actual end is at base position 172281 of RP11-809C23.

Submitted (05-DEC-2001) Genome Center, University of Washington, Box 352145, Seattle, WA 98195, USA Samphimmachak, C., Dison, M.V., Zhou, Y., James, R.A., Rouse, G., Wu, Z., Samphimmachak, C., Phelps, K.A., Buckley, D., Kibukawa, M., Raymond, C. and Haugen, E.D. Direct Submission Submitted (31-MAY-2002) Genome Center, University of Washington, Box 352145, Seattle, WA 98195, USA On May 31, 2002 this sequence version replaced gi:17352427. Center: University of Washington Genome Center Center Code: UNGC Whe biter http://www.genome.washington.edu	Drafting Center: Wugger awaining content Drafting Center: WUGGE Project Information Center project name: chr-3 Center project name: RP11-6GB (bc0186) Summary Statistics Sequencing vector: unknown; 62% of reads	Sequencing vector: plasmid; LOWS 124; 348 for reads Chemistry: Dye-terminator E17: 668 of reads Chemistry: Dye-terminator Big Dye; 34% of reads Assembly program: Phrap; version 0.990319 Consensus quality: 169322 bases at least Q40 Consensus quality: 169405 bases at least Q20 Consensus quality: 169418 bases at least Q20 Consensus quality: 169418, sum-of-contigs Consensus Quality: 109418, sum-of-contigs	Overlapping Sequences: 7. RP11-420K5 (UWGC:bc0651) AC104444, 57330-bp overlap 3': RP11-420X3 (UWGC:bc0659) AC104188, 73864-bp overlap Sequence Quality Assessment with sequence quality be been annotated with sequence quality	estimates computed by the Phrap assembly program. All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp. Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.	This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.	parison of the experimentally ence-predicted fragments is gidgested sequence consists of accurately represent the ention a variable cutoff (approximene fingerprint and hence do are no significant remaining ental and predicted values. Unated by dashed lines.	SeqDerMap FngrPrnt SeqDerMap FngrPrnt 8696 8873 8104 8155 459 <800

AAV43215 standard; cDNA; 635 BP

AAV43215;

New nucleic acid from retroviruses - useful for diagnosis, prevention and treatment of, e.g. multiple sclerosis. Multiple sclerosis associated retrovirus; MSRV; MS; pol gene; gag gene; env gene; rheumatoid arthritis-associated virus; ss. /*tag= a /product= "Encodes protein AAW71067" Multiple sclerosis associated retrovirus fragment 4. Perron H, Beseme F, Bedin F, Paranhos-Baccala Komurian-Pradel F, Jolivet-Reynaud C, Mandrand Multiple sclerosis associated retrovirus Disclosure; Page 183; 286pp; English. Location/Qualifiers 96US-00756429. 97WO-IB001482. (first entry) WPI; 1998-322732/28. P-PSDB; AAW71067. (INMR) BIO MERIEUX WO9823755-A1 26-NOV-1997; 29-DEC-1998 26-NOV-1996; 04-JUN-1998.

The present sequence represents a multiple sclerosis (MS) associated retrovirus (MSRV) genomic fragment used in the method of the invention.

The invention provides complete or partial genomic sequences of the MSRV-1 pol gene, gag gene and env gene, and polypeptides encoded by these genes. The invention also provides antibodies raised against the polypeptides. The genomic sequences, polypeptides and antibodies also claimed useful for diagnosing infection by MS and rheumatoid arthritisassociated viruses, and also for prevention and treatment of infection with these viruses
                                                                                                                                                          120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid which comprises the gene of a retrovirus associated with multiple sclerosis or rheumatoid arthritis. The methods and compositions of the present invention are useful for diagnosing, preventing and/or treating multiple sclerosis and/or rheumatoid arthritis. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CAAATTGTTCTTCAAATGGAGCACCAGATGGAGTCCATGACTAAGATCCACGTGGACCC

multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise pol, gag or reverse transcriptase genes (or their fragments) encoding the proteins or defined beptides (including immunodominant peptides, antiganic peptides or conserved motife). Also included are a process for detecting a virus associated with multiple sclerosis or rheumatoid arthritis in a biological sample, a nucleic acid probe for the detection of a virus associated with multiple sclerosis or rheumatoid arthritis, a primer for the amplification by polymerisation of a nucleic acid of a virus associated with multiple sclerosis or rheumatoid arthritis, a primer for the amplification by polymerisation of a nucleic acid of a virus material associated with multiple sclerosis or rheumatoid arthritis, a proteolytic, reverse transcriptase or ribonuclease H activity from MSRV, and an antibody directed against the MSRV-1 virus obtained by immunologically reacting the MTRV-1 virus obtained by immunologically reacting of the antigenic polypeptide defined above. The nucleic acids are useful for detecting a biological sample a virus associated with multiple sclerosis or rheumatoid arthritis. The present sequence is a claimed MSRV-search sequence of or exposure to a virus associated with multiple sclerosis or rheumatoid arthritis. The present sequence is a claimed MSRV-search sequence whose identity cannot be

The specification describes a MSRV-1 protein. This is unusual for LTRs, in particular in the RUS region. The sequence includes CAAT and TATA signals which are present in the U3 and R regions and are not directed towards the CDS indicated in the features table. Probes and antibodies to the MSRV-1 retrovirus presence of MSRV-1 retrovirus in a biological sample. (Updated on 06-AUG-

endometriosis, endometrial or ovarian tumour; autoimmune/inflammatory disorder such as acquired immune deficiency syndrome (AIDS), allergies, contact defamatitis; disorders of the placenta such as preclampsia, abruptic placente etc. Sequences of the invention are also useful for analysing a proteome of a tissue or a cell type. EMBRY proteins are useful as immunospens for preparing antibodies. Polynucleotides of the invention are useful for creating knockin humanised animals or transgenic animals to model human diseases. They are also used in gene therapy. The
                                                                                                                                                                                                                                                New polypeptides of human embryogenesis associated proteins for screening modulators useful for treating or preventing disorders e.g. endometriosis, infertility, allergy, preeclampsia.
                                                                                                                                                                                                                                                                                                                                                               invention relates to human embryogenesis associated proteins (EMBRY)
                                                                                                                                                                                                                                                                                                                                                                          and nucleic acid molecules encoding such proteins. EMBRY sequences are useful for screening modulators useful for treating or preventing disorders associated with abnormal expression of EMBRY. The disorders treated include reproductive disorders such as infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ACTADADATGCTAATTAGGCAAAAATAGGGGGTAAAGAAATAGCCAATCATCTATTGCCTG

The invention provides complete or partial genomic sequences of the MSRV-1 pol gene, gag gene and env gene, and polypeptides encoded by these genes. The invention also provides antibodies raised against the perport sequences, polypeptides and antibodies are also claimed useful for diagnosing infection by MS and rheumarcid arthritisassociated viruses, and also for prevention and treatment of infection
                    nucleic acid from retroviruses - useful for diagnosis, prevention and

New isolated nucleic acid and their fragments having the pol gene of a retrovitus, useful for diagnosing, preventing and/or treating multiple sclerosis and/or rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid which comprises the gene of a retrovirus associated with multiple sclerosis or rheumatoid arthritis. The methods and compositions of the present invention are useful for diagnosing, preventing and/or treating multiple sclerosis and/or rheumatoid arthritis. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cccreratricaacriccrigiraagrirercriccreaaarreaagcreraagcra

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           임
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening drug candidates; (ii) for screening of bioactive agent capable of bioactive agent capable of modulating the activity of CAP; (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vi) for tagnosing carcinoma; (vii) for neutralizing the effect of CAP; (vi) for traating carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma are appropriately to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding capable of this patent is an equivalent to basic patent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       19571 CCCTGTATCTTTAACCTCCTTGTTAAGTTTGTCTCTTCCAGAATTGAAACTGTAAAACTA 19630

                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to novel human diagnostic and therapeutic

C polymucleotides designated dithp (ACC46080-ACC46749) and to their encoded
proteins (DITHP; ABR4136-ABR41812). The invention also relates to
polymucleotide sequences at least 90% identical to the dithp CDNA
c proteins (DITHP; ABR4136-ABR41812). The invention also relates to
c polymucleotide sequences at least 90% identical to the dithp CDNA
c sequences of the invention; recombinant vectors, host cells and
c recombinant production of DITHP proteins; antibodies specific for DITHP
c recombinant production of DITHP proteins; antibodies specific for DITHP
c proteins microarrays comprising dithp nucleic acid sequences; methods of
detecting dithp nucleotide and protein sequences; methods of
c corpounds which specifically bind a DITHP proteins and methods of
c assessing the toxicity of test compounds using a dithp hybridisation
c probe. Dithp nucleic acid sequences and DITHP proteins may be used in the
diagnosis of a wide variety of conditions including cancer and other cell
c proliferative disorders; autoimmune or inflammatory disorders; bacterial,
viral, fungal or parasitic infections; hormonal disorders; metabolic
c disorders; neurological disorders; gastrointessinal disorders; transport
c disorders; neurological disorders; gastrointessinal disorders; transport
c disorders; and connective tissue disorders. They may also be used to
screen for modulators of protein activity or gene expression. DITHP
c proteins can additionally be used in analysis of the proteome of a tissue
c or cell type and to induce antibodies. The dithp nucleic acids are
c additionally useful in somatic or germine gene therapy of the disorders
mentioned above, as a source of antisense sequences, as a source of
probes and primers, in genotyping and identification of individuals, in
the generation of transgenic animal models of human disease or knock in
the generation of transgenic animal models of human disease or knock in
the generation of the protein active set

```
detecting a virus associated with multiple sclerosis or rheumatoid arthritis in a biological sample, a nucleic acid probe for the detection of a virus associated with multiple sclerosis or rheumatoid arthritis, a primer for the amplification by polymerisation of a nucleic acid of a virus associated with multiple sclerosis or rheumatoid arthritis, a primer for the amplification by polymerisation of a nucleic acid of a virus associated with multiple sclerosis or rheumatoid arthritis, a polypeptide exhibiting an inhibitory activity on the proteolytic, reverse transcriptase or ribonuclease H activity from MSRV, and an antibody directed against the MSRV-1 virus obtained by immunogenic agent consisting of the antigenic polypeptide defined above. The multiple sclerosis or rheumatoid arthritis, or for detecting in a biological sample, the presence of or exposure to a virus associated with multiple sclerosis or rheumatoid arthritis. The present sequence is a claimed MSRV-associated sequence whose identity cannot be accurately determined. Note: The SEQ ID numbers for the sequences as a displayed in the main body of the patent do not match the SEQ ID numbers in the sequence listing. Consequencely those sequences mentioned in the claims may not be the sequences the authors intended to claim.

This invention describes novel human secreted proteins encoded by polynucleotides isolated from human adult testes, adult brain, adult blood or adult placenta, or murine adult bone marrow or thymus cDNA blood or adult placenta or murine adult bone marrow or thymus cDNA activities which would make them invention are predicted to have biological activities which would make them wuitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, haemostatic and thrombolytic activity, rhemotactic/emeokinnetic activity, haemostatic activity, and thrombolytic activity, receptor/ligand activity, and tumour cativity, adharin/tumour invasion suppressor activity, and tumour continity. The polynucleotides are also stated to be useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2430

This is the human secreted protein AJ172 2 nucleotide sequence, obtained from a human adult testes cDNA library. The invention relates to secreted from a number proteins. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals. Detection of the levels of the proteins can be used for the diagnosis of e.g. pre-eclampsia, placencial pathology or cancer. Agents which modulate the expression or function of the proteins may be used for treating a neoplastic disease and inhibiting metastasis. Other suggested activities include nutritional activity (e.g. in feeds), cytokine and cativities include nutritional activity, immune stimulating (e.g. as vacines) or suppressing activity, haemactopiesis regulating activity, clissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, haemactory activity, cadherin/tumour creceptor/ligand activity, and tumour inhibition activity. The invasion suppressor activity, and tumour inhibition activity. The polynucleotide sequences are also stated to be useful for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2610
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2910

coagulation disorders, inflammatory diseases (e.g. systemic inflammatory response syndrome (SIRS), ischaemia-reperfusion injury, Crohn's disease), anaphylaxis and hypersensitivity. Proteins are also useful for inducing tumour immunity, for inducing bone, cartilage, tendon, ligament and/or nerve growth or regeneration, for proliferating neural cells and for inhibiting tumour growth. Proteins are also useful as chemokine for mammalian cells (e.g., monocytes, fibroblasts, neutrophils), and also useful as inhibitors of receptor/ligand interactions. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a protein comprising fully defined A2302 1 protein or BD127 1 6 protein. The polynucleotides are useful for expressing recombinant proteins for analysis and are also useful as chromosome markers or tags to identify chromosomes or to map related positions. The proteins are useful as amino acid supplement, carbon source, nitrogen source and carbohydrate source. The proteins are useful for treating various immune deficiencies and disorders (e.g. severe combined immunodeficiancy (SCID)), antoimmune disorders (e.g. multiple scletchis (e.g. sethma), myeloid or lymphoid cell deficiencies, allergic seactions (e.g. sethma), myeloid or lymphoid cell deficiencies, osteoporosis or osteoarthritis, peripheral nervous system diseases (e.g. peripheral neuropathy, Alzheimer's disease, Parkinson's disease),
                                                                                                                                                                                                         autolmmune disorder; multiple sclerosis; systemic lupus erythematosus; rheumatoid arthritis; allorgic reaction; asthma; myeloid cell deficiency; pymphoid cell deficiency; osteoporosis; osteoarthritis; peripheral nervous system disease; peripheral neuropathy; Alzheimer's disease; Parkinson's disease; coagulation disorder; inflammatory disease; systemic inflammatory response syndrome; SIRS; ischaemia-reperfusion injury; Crohn's disease; anaphylaxis; hypersensitivity; regeneration; neural cell proliferation; fertility; tumour; chemokine; human; secreted protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Proteins AZ3021 encoded by clone AZ3021 from human adult colon, and BD12716 encoded by clone BD12716 from human fetal kidney cDNA library, useful for treating e.g. multiple sclerosis and rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Σ

```
The present sequence encodes a human endogenous retrovirus envelope protein. The specification describes a method for detecting expression of an envelope protein from a human endogenous retrovirus (HERV), in cells, of a tissue or culture. The method comprises detecting syncytia formation due to the fusogenic properties of the envelope protein. Envelope polypeptides and polymucleotides are used to produce therapeutic or prophylactic compositions, particularly for treatment of cancer, to correct defects in placental development (or other natural formation of other types of syncytia), and to promote adhesion of cells in grafts or cellular repair processes. Expression of sequences antisense to the polymucleotide are used to prevent formation of syncytia
                                                                                                                                                                                                                                                                     Detecting expression of human endogenous retrovirus envelope protein in cells of a tissue or culture, from its ability to induce syncytia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cccienarcitraaccicciratraacitricicicitricaaaaicaaacienaaaacia
